

## Hole Plugs

Installation Accessories for Duct Sealing Devices

Hole Plugs are designed to temporarily or permanently seal cable port or subduct openings in Simplex, Triplex and Quadplex sealing devices. They are made of polypropylene plastic and larger sizes feature pull tabs for easy removal.

After an initial cable installation, additional cables may be required in the future. To accommodate this need, a multi-port plug equipped with hole plugs is recommended to allow for future cabling and proper sealing without replacing the plug. Depending on the new cable size, a Bushing Sleeve Adapter might be needed to complete the installation.

Part Number	Product Descriptor	Hole Plug Size	
		inches	mm
